1 Installation and usage:

1. Download the `symbols.tex` file and put it in the same folder as that of the main `.tex` file.
2. Add `\input{symbols.tex}` after all `\usepackage{}` headers in the main `.tex` file.
3. Refer to `test.tex` and `test.pdf` for further help.
4. Note that, `[·]` : Optional argument and `{·}` : Mandatory argument

2 Packages used:

Thanks to these packages. They are all included and no need to include them manually. Other packages might have issues with it.

1. `algorithm`
2. `amsmath`
3. `amsthm`
4. `amssymb`
5. `dsfont`
6. `algpseudocode`
7. `thmtools`
8. `xcolor`

3 Available environments:

1. `Theorem`
2. `Definition`
3. `Proposition`
4. `Lemma`
5. `Corollary`
6. `Example`
7. `Remark`

See Section 6 for usage information.

4 Extras in algorithms:

If you use `algorithmic` inside `algorithm` environment,

1. All the following introductory commands are valid
 - using `\Require` will result into `Require:`
 - using `\Ensure` will result into `Ensure:`
 - using `\Input` will result into `Input:`
 - using `\Init` will result into `Initialize:`
 - using `\Output` will result into `Output:`
2. `\Print` and `\To` commands are compatible with required packages

See Section 7 for usage information.

8 Underbrace inside a matrix environment

Short usage: `\undermat{arg1}{arg2}`

For example:

$$\mathbf{J}_k = \begin{bmatrix} 0 & \dots & 0 & 1 & \dots & 0 \\ \vdots & & & & \ddots & \\ 0 & \dots & 0 & \dots & & 1 \\ \underbrace{0 \dots 0}_k & \dots & & & & \end{bmatrix}$$

Code:

```
\begin{align*}
\mathbf{J}_k =
\begin{bmatrix}
0 & & \dots & 0 & & 1 & & \dots & 0 \\
\vdots & & & & & & & \ddots & \\
0 & \dots & 0 & \dots & & & & & 1 \\
\end{bmatrix}
\end{align*}
```
