# Latex Symbols Template

Short symbol commands for  $\LaTeX$ 

version: 2.0.01

Arindam Bose

December 18, 2019

### Installation and usage:

- 1. Download the symbols.tex file and put is in the same folder as that of the main .tex file.
- 2. Add \input{symbols.tex} after all \usepackage{} headers in the main .tex file.
- 3. Refer to test.tex and test.pdf for further help.

### Required packages (included):

- 1. amsmath
- 2. dsfont
- 3. algpseudocode
- 4. xcolor

#### Available environments:

- 1. Theorem
- 2. Definition
- 3. Proposition
- 4. Lemma
- 5. Corollary
- 6. Example

See Section {Theorem-like environments} below for usage information.

### Extras in algorithms:

If you use algorithmic inside algorithm environment,

- 1. using \Require will result into Input:,
- 2. using \Ensure will result into Initialize:.

See Section {Algorithm} below for usage information.

### Table of usage:
